

Drone Thermal Roof Inspections a New Leverage Technology

Tarillo Vue provides infrared services to identify thermal conditions on commercial roofs throughout the country utilizing drones with high resolution thermal imagers. We work with Property Owners, Roofing Companies/ General Contractors, Public Insurance Adjusters, Legal Teams, Consultants, Insurance Companies and Engineers.

-  Make educated decisions on roof repair or replacement based on the cold hard facts from a detailed inspection report.
-  Routine and proactive maintenance programs help validate current roof conditions and help justify roof conditions before and after storms.
-  Expedite the repair process by locating potential leaks efficiently.
-  Our team of experts provide detailed reports to illustrate current roof conditions on any previous underpaid or denied insurance claims.
-  Calculate percentage of the roof w/ thermal anomalies to help determine if the roof is a total loss relative to what the policy covers.
-  By utilizing aerial pictometry imaging, we can accurately process roof measurement reports.
